

## Indiana Line Diva 7 – center speaker

Indiana Line Diva 7 is a 2-way center channel speaker optimised for realistic and detailed speech reproduction in home theater systems. It features two 150 mm mid-woofer drivers that provide high energy and articulation in their supported frequency ranges, with a 26 mm tweeter positioned between them. The bass reflex port is located at the rear of the cabinet, designed to perform optimally when placed on a shelf or near a wall, delivering full-range sound with unrestrained dynamics. Combined with other Diva series speakers, it creates a high-quality, sonically cohesive home theater speaker setup.

### Natural high frequencies

The 26 mm tweeter ensures life-like high frequencies. It features a newly designed aluminium front plate with a rubber surface that shapes the high-frequency characteristics, providing a wider soundstage. A unique feature of Indiana Line tweeters is the Radial Vent Chamber—a specially shaped damping chamber in the form of a ring surrounding the voice coil. This design prevents typical resonances found in chambers positioned axially behind the dome, allowing for naturally sounding, uncoloured trebles.

### Curv membrane

Indiana Line speakers utilize two 150 mm mid-woofer drivers that are equipped with exclusive Curv membranes, made from woven polypropylene material. This unique membrane ensures neutral and precise low-frequency reproduction, providing clear bass and midrange tones. It also offers excellent directional

characteristics and optimal damping across a wide frequency range, all while minimizing distortion. Such features are typically found in much more expensive speaker designs.

### Proprietary Dual-Wave suspension

The Curv membranes benefit from Indiana Line's proprietary Dual-Wave upper suspension system. This technology extends the linear operating range of the speaker and reduces distortion in the low bass range, delivering clearer, stronger bass and better-defined midrange. This enhancement is particularly noticeable when listening to instruments such as percussion, string, and acoustic instruments. Additionally, the mid-woofer drivers are housed in new aluminium baskets that not only have an attractive design but are also specifically engineered to work in harmony with Dual-Wave suspension. These baskets do not impede the free airflow around the rear of the membrane, minimizing unwanted resonances.

## Redesigned crossover

The Diva 7 model features a completely redesigned and highly optimized crossover. The circuit topology, the number of components used, and their specifications have been carefully chosen to complement the speaker cabinet and the drivers used. This design approach minimizes power loss and achieves a very even frequency response, ensuring that all frequency ranges are perfectly cohesive.

## Two attractive finishes

The Diva 7 center speaker not only delivers versatile and engaging sound but also boasts an impressive appearance. It is now available in two colour options. Alongside the classic black finish, there is a new version with a white front and an oak veneer cabinet. The front of the speaker is adorned with a matte lacquer, while the rest of the cabinet is covered in PVC veneer. Another new feature is the magnetically

attached grille, replacing the previous plastic pins. This update further emphasizes the high quality and modern design of the Diva 7 model.

## About brand

Founded in 1977 in Turin, the Indiana Line brand through the years of presence on the audio market has managed to establish its position among the lovers of good sound, still remaining faithful to its philosophy of creating loudspeakers ensuring the highest quality of performance combined with the rational use of components. This approach allows the models offered by Indiana Line to achieve sonic qualities that exceed the parameters likely to be reached in a similar price range. The variety of constructions available in the Indiana Line catalogue allows you to choose models perfectly suited to the needs of music lovers. The loudspeakers of this Italian brand are ideal for playing each type of music.

## The most important features of Indiana Line Diva 7:

- 2-way center speaker
- 26 mm silk dome tweeter with radial damping chamber
- 2 x 150 mm woofer with Curv membrane
- New tweeter front design
- Proprietary Dual-Wave suspension for the pair of 150 mm drivers
- New cast aluminium baskets for the midwoofers
- Bass reflex enclosure with rear port
- Optimized crossover using the latest design techniques
- Magnetically attached black grille
- Frequency response: 45 – 23,000 Hz
- Suggested amplifier power: 30 – 140 W
- Two colour options: black or white front with oak cabinet
- Dimensions (H x W x D): 166 x 470 x 260 mm
- Weight: 8.3 kg
